Tyler Ingersoll

Engineering Director | Frontend Architecture

hello@tyleringersoll.com | tyleringersoll.com
linkedin.com/in/tyleringersoll | github.com/tyleringersoll

I lead frontend engineering and architecture for customer-facing enterprise applications. My background spans fintech platforms, design systems, and instrumentation software. The work I enjoy most is taking complicated legacy frontends and turning them into systems that are easier to understand, maintain, and extend.

RECENT EXPERIENCE

Best Egg

Director II, Software Engineering | 2026 - Present

Manage three direct reports - one frontend engineer and two backend engineers - working on customer verification, servicing, and authentication.

- Balance project priorities and workload across the team so engineers can focus on the right work without becoming overwhelmed.
- Work with product, design, and operations to plan delivery and coordinate frontend and backend implementation.
- Support engineer development and participate in cross-functional interview panels.
- Set technical direction for core customer-facing applications while continuing to contribute directly to frontend implementation.

Senior Lead Software Engineer II | 2024 - 2025

- Led the frontend side of third-party fintech integrations including MX and Method Financial, from architecture through implementation and rollout.
- Integrated multiple A/B test UIs via feature flags to support product experimentation and release management.
- Mentored engineers beyond the immediate team and helped guide frontend direction across adjacent work.

Senior Lead Software Engineer I | 2022 - 2024

- Led architectural updates to introduce lazy-loaded modules, optimize main bundle sizes, and transition UI components from Bootstrap to Angular Material.
- Helped architect and launch a quick pay feature that customers can use without signing in, along with autopay scheduling to simplify the payment experience for customers.
- Golden Egg Award winner for "BE a Builder of Great Teams" (Q3 2023).

Vanguard

Senior Frontend Developer | 2019 - 2022

Worked on a four-person team building a design system and shared frontend foundation for Vanguard Financial Advisor Services applications.

- Built a web component library with custom element wrappers so the system could be used across Vue, Angular, and Adobe Experience Manager without separate framework-specific implementations.
- Partnered with leadership and development teams during a division-wide rebrand to drive adoption of the design system and improve UI consistency across products.
- Designed and built a Vue/NestJS reference application with CI, content structure, environment setup, and third-party integrations already in place, so teams could start from a working application instead of assembling the stack from scratch.
- Set up AWS-based CI/CD pipelines for automated Storybook documentation deployments so teams had a shared place to reference the latest components and usage patterns.

EARLIER EXPERIENCE

Technical Writers, Inc.

Web Application Developer | 2017 - 2019

Embedded with Agilent Technologies' R&D software engineering team as the primary frontend developer, building web-based instrument control interfaces shipped with Agilent hardware products.

- Led frontend development for Agilent's Gas Chromatography web UI, including real-time WebSocket monitoring and two-way control using Sencha/Ext JS.

Trellist Marketing and Technology

Digital Development Services | 2014 - 2017

Worked across agency projects spanning web, email, SharePoint, and internal enterprise systems for brands including Bank of America, David's Bridal, Chemours, Blue Cross Blue Shield Global, and DuPont.

- Built responsive websites and landing pages for enterprise clients including Bank of America, David's Bridal, NASA Federal Credit Union, and Chemours.

Technical Writers, Inc.

Frontend Developer / Senior Technical Writer | 2007 - 2014

As a long-term embedded consultant with Agilent Technologies' R&D software engineering team, I worked across both frontend applications and technical documentation for global scientific instrument product lines.

- Designed standalone web-based document delivery applications distributed by USB, DVD, and InstallShield-based installers.

Technical Writer / Web Developer | 2003 - 2005

Embedded on-site at AstraZeneca, supporting the global pharmaceutical regulatory submission team through documentation packaging and internal web development.

- Designed and built the global regulatory intranet site to centralize team content.

Wilmington Trust Company

Tech Support, Level 1 | 2001 - 2003

Transitioned from an internship into a full-time support role, balancing first-level help desk responsibilities with serving as the primary developer for the division's intranet applications.

- Redesigned and developed the IT Service & Support Division intranet website.

Intern, Online Portfolio Group | 2000 - 2001

While finishing my undergraduate degree at the University of Delaware, I supported the Online Portfolio Group on a production Microsoft Access call logging application and web development projects.

EDUCATION

University of Delaware | Bachelor of Science, Business Administration | Concentrations: Accounting and Finance | **College of Business & Economics**

SELECTED TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS/SCSS, Python, SQL

Frameworks: Angular, Vue.js, Nuxt 3, NestJS, Django, Tailwind CSS, Angular Material

Architecture: Web Components, Design Systems, SSR, Accessibility (WCAG), CI/CD, State Management

Projects: ingersoll.dev | **Music:** tyleringersolldrums.com
